By New Zealand Institute

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1901 Excerpt: .almost fully developed, and it had increased 6 mm. in height. It will be noted that the stem-growth is very slow, its length at this point being exceeded by that of several of the petioles. Description of Seedling. Primary root (in plant with 1st leaf at an early stage of development) 14mm. long, white, fleshy, stout, with very few lateral rootlets. l.c., p. 521. I am referring to the plant usually known by botanists in New Zealand; whether it be Hooker's species is another matter. The plant in question is especially abundant on some parts of Peveril Peak, Canterbury, where it forms quite a large proportion of the subalpine scrub. Hypocotyl 5 mm. long, terete, thickest at base, pinkish, especially towards cotyledons. Cotyledons oblong, petiolate, bright-green or purplish-red throughout, obtuse, entire, with margin ciliated with glandular hairs; lamina 4mm. x 3mm., horizontal, bent almost...
