

Transition Metal Complexes

By ARPI MAJUMDER

VDM Verlag. Paperback. Book Condition: New. Paperback. 288 pages. Dimensions: 8.7in. x 5.9in. x 0.7in. The main objectives of my Ph. D. work were to prepare transition metal complexes, to characterize them by analytical, spectroscopic, electrochemical and crystallographic methods, and also to investigate their catalytic activity and magnetic properties. I followed various kinds of synthetic routes to produce single crystals, solved their structures and studied kinetic and magnetic properties to realize the above mentioned goal. In particular, A novel Cu(II) complex was prepared with carbonato ligand, which was the first report of a polymer showing the rare tridentate mode exhibiting long-range ferromagnetic order. The macrocyclic hexanuclear Mn(III)-compound has been evaluated as the model system for the catechol oxidase enzyme. Many of these complexes exhibited novel supramolecular architectures through hydrogen bonds. Most of the synthesized complexes showed considerable photoluminescence; it opens up the opportunity for photochemical applications. The complexes with novel architectures have potential applications as catalysts, molecular magnets, photosensitizers, zeolite type materials etc. This study should be especially useful to professionals in transition metal chemistry field. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.

Reviews

Thorough manual! Its this kind of excellent study. It really is written in straightforward terms and never difficult to understand. I am very happy to inform you that this is basically the very best pdf we have read through during my individual existence and could be the greatest ebook for possibly.

-- **Dr. Arno Sauer Sr.**

An exceptional publication and also the typeface applied was fascinating to learn. It normally will not expense excessive. Your life period will be transformed once you comprehensively look over this pdf.
